*Tested with our 'LED Light Spectrometer OHSP350IR' to ensure accuracy for dosing purposes

Where can I place my sauna?

The saunas can be placed on carpet, tiles, timber or concrete flooring. Outdoor placement is possible if the sauna is completely protected from the weather, however, colder climates can affect the warm-up time. [Learn more](#)

What's the difference between the Evolve Mini and the Evolve 10?

The main difference is the smaller size and ease of design for the Evolve Mini making it more cost effective to produce. To visualize the differences, [click here](#) to watch a short video.

What's the difference between the Evolve 20 and the Supreme 2?

The key difference is that the Evolve 20 features a large 300-watt heater mounted to the glass door, which adds more power and 360° body coverage. To visualize the difference in design, [click here](#) to watch a short video.

What's the difference between the Evolve 30 and the Supreme 4?

The Supreme 4 is larger and features bench seats on the side walls, but no heaters on the front wall. To visualize the difference in design and layout, [click here](#) to watch a short video.

What's the maximum temperature & warm up time?

The maximum temperature setting of our saunas is 65°C, however, it's important to note that the actual cabin temperature is NOT the key factor. Therefore, a pre-heat time of 15-20 minutes is all that is required to bring the heaters up to their full operating temperature (100% far infrared emission) prior to commencing your sauna session. [Learn more](#)

How much will my sauna cost to run?

A typical sauna session including heating time won't exceed 1 hour. We estimate costs range from \$0.35 cents per hour for the Evolve Mini up to \$0.57 cents per hour for the Supreme 4.

How easy is the sauna to install?

All models include an invisible fastening system where the panels simply slot together to create a solid connection. Installation is available on request. To view all Assembly Manuals, [click here](#).

How often can I use the sauna?

There is no right or wrong answer as each person's needs differ. Typically for a healthy adult it is safe to use the sauna every day or even more than once per day. However, if you have any concerns please check with your health practitioner.

Can I install the Rojo Refine panels inside my sauna?

For several reasons we do not recommend installing LED lights inside the sauna. First light therapy is non-thermal and sweat refracts light making it less effective. Second, treatment times are short compared with the average sauna session. Third, the Rojo Refine lights have not been designed for high heat exposure in the sauna. [Learn more](#)

Will a full spectrum sauna achieve the same result as adding Rojo Refine panels?

So-called 'full spectrum' saunas DO NOT meet the criteria for Photobiomodulation as they provide very little energy at the specifically required wavelengths. To learn more read our blog: ['Full Spectrum Saunas – why they may not be the best.'](#)
